## Mine Falls Park Trails

New Hampshire

*Overview Mine Falls Park in Nashua is a 300-acre-plus urban park with a network of approximately 9.7 miles of a variety of trail types.*

### Overview

Mine Falls Park in Nashua is a 300-acre-plus urban park with a network of approximately 9.7 miles of a variety of trail types. This forested park offers an extraordinary nature experience in the heart of New Hampshire's second-most populous city along the Nashua River. The park is a beacon of recreational opportunities; in addition to the trail network, the area boasts historic exploration, wildlife viewing, ball fields, and ample fishing spots.

### About the Route

One great starting point for the Mine Falls Park Trails is the Mine Falls Gatehouse/Dam trailhead, located on the western side of the trail system, between the Nashua River

and Mill Pond, accessible from Stadium Drive. The impressive Mine Falls Dam appears right next to the parking area; here, trail users can also glimpse a gatehouse (currently being restored) constructed by the Nashua Manufacturing Company in 1886 as part of the canal system that is now on the National Register of Historic Places.

Mine Falls Park extends to the east, immediately presenting you with three primary pathway options. Following the northern side of the Nashua Canal, the old towpath travels east directly alongside the water. In 1.2 miles, the trail crosses under US 3/Everett Turnpike and comes to a trail junction at the Whipple Street trailhead. There are many different trail connections throughout the park, and three bridges cross the canal.

Staying along the northern side of the canal for the remaining 1.1 miles, the trail makes its way to the eastern edge of the park. Beautiful views of the river, wetlands, and wildlife abound on the northern side of the trail overlooking Oxbow Lake and The Cove. The Nashua Manufacturing Company Historic District is located just one block east of the park at Clocktower Place and Factory Street Extension.

In addition to the canal towpath, a trail on the northern edge of the park closely follows the south bank of the Nashua River. Just after passing under US 3/Everett Turnpike, trail users can opt to continue straight toward the eastern side of the park or turn left to make a small loop through the wooded area that runs adjacent to the southern side of the river.

To the south, a paved trail segment begins just off Stadium Drive near Stellos Stadium and closely follows the southern edge of the canal for the length of the park.

Throughout the park, trails suitable only for hiking offer a unique wilderness experience right in Nashua.

### Connections

# Mine Falls Park Trails

*New Hampshire*
