Miami & Erie Canal Towpath

Ohio

The Miami & Erie Canal Trail spans nearly 40 miles from Delphos to Fort Loramie, passing through many quaint western Ohio towns

Trail History

The Miami & Erie Canal was built between 1825 and 1845, an engineering marvel stretching from Cincinnati to Toledo. This canal was heavily used until competition from the railroad caused the decline of the canal system. The Miami & Erie Canal was last used commercially in 1929.

The Miami & Erie Canal Trail spans nearly 40 miles from Delphos to Fort Loramie, passing through many quaint western Ohio towns and villages.

About the Route

Numerous locks, spillways and historic buildings from the canal era remain along the trail's route, and much of the local history has been preserved in the many museums located along the corridor. Note that its surface is largely unpaved and varies greatly along the route.

The trail connects three state parks, local parks, community trails and historical sites. Sections of the trail are part of the [Buckeye Trail](#) and [North Country National Scenic Trail](#).
