Hanover Branch Rail Trail

Massachusetts

Hanover Branch Rail Trail

Massachusetts

In the southeastern outskirts of Boston, the 3.4-mile Hanover Branch Rail Trail connects the communities of Abington and

Much of the trail is forested and wildlife sightings are common.

Trail History

The rail trail follows the former corridor of the Hanover Branch Line, built in the 1860s by E. Y. Perry, a Hanover businessman who produced tacks. The railroad originally ran between Hanover Four Corners and North Abington before becoming part of the Old Colony Line in 1887. In the 1940s and '50s, self-propelled cars for commuters ran on the tracks.

In the southeastern outskirts of Boston, the 3.4-mile Hanover Branch Rail Trail connects the communities of Abington and Rockland. Locally, the trail's east and west halves are sometimes referred to as the Abington Rail Trail and the Rockland Rail Trail.

About the Route

Leaving from Market St. on the western end of the trail, the trail heads east, passing the French stream. The trail then passes through the heart of Rockland. As the trail meets Market St. in West Hanover, the trail crosses the street and heads southeast where it eventually dead ends. There is also a short spur trail to Ellis Field, which offers a playground and parking lot.

Hanover Branch Rail Trail

Massachusetts
